**Emman Quistadio**

Magdalo, La Paz • Iloilo City, Philippines 5000 • Quistadioemman@gmail.com • +639639859707

## Education

**ISAT University, Main Campus** Iloilo City
Bachelor of Science in Information Technology July 2023
Relevant Coursework: Introduction to Computing, Programming Logic Formulation, Fundamentals of Programming, Intermediate Programming, Human Computer Interactions, Platform Technologies, Information Assurance and Security 1, Data Structures and Algorithms, Networking, Object Oriented Programming, Web Systems and Technologies, Systems Analysis and Design, Fundamentals of Analytics Modeling, Advance Database Systems, Integrative Programming and Technologies 1, and Mobile Applications Development

## Experiences

**DENR-EMB REGION VI** Parola, Iloilo City
**Computer Programmer** January 2024 – Present

- Designed and developed four internal web-based systems that streamlined operations and improved service delivery:
    - **Records Management System** – facilitated digital archiving and document tracking within the office.
    - **Queueing System** – organized client servicing, enhanced customer experience, and generated daily/monthly reports.
    - **Payslip System** – enabled staff to securely access and download electronic payslips.
    - **HR Recruitment System** – automated job posting, applicant tracking, and examination/interview scheduling.
- Provided technical solutions and system enhancements in response to client concerns, ensuring system reliability and user satisfaction.
- Provided regular technical support and troubleshooting assistance across departments to resolve system-related concerns.

**DENR-EMB REGION VI** Parola, Iloilo City
**Clerical and Tech Support** February 2023 - May 2023

- Developed a system using PHP, HTML, and SQL, which greatly improved the company's record- tracking capabilities.
- Assisted in managing and organizing the website's database.
- Conducted PC reformatting, software installation, and proficiently troubleshooted network issues, ensuring smooth and optimized computer systems for the company.
- Provided technical assistance and support to staff.

## Technical Skills and Projects

**Programming:** PHP, JavaScript, Python, CSS, HTML
**Database:** MySQL
**Framework:** Codigniter4, Laravel, Bootstrap
**Version Control:** Git, Github

**Records Management Information System**
Upgraded the existing Records Management System by migrating it to the CodeIgniter 4 (CI4) framework, enhancing system performance, structure, and maintainability. Updated and refined several core features to improve usability and efficiency. The upgrade involved optimizing the backend logic, refining the user interface, and ensuring compatibility with new development standards. The improved system was later presented to other regional offices as one of the proposed candidates for a centralized records system to be used nationwide.

**NISU Learning Management System**
Developed using native PHP, this system serves as a virtual learning environment designed to support the school's transition to online classes. It allows teachers to manage their classes by admitting students, uploading learning materials, and assigning homework and activities. As part of the development, I added an interactive game feature inspired by Kahoot to help students stay engaged and make learning more enjoyable through friendly competition.

**Queueing System**
As part of an initiative, I proposed and developed a queueing system for the office to streamline the handling of daily client transactions. The system helps organize client flow, improve service efficiency, and generate reports for monitoring purposes. It also includes a customer satisfaction feature to gather feedback. This system significantly improved both client and employee experience, making the process more orderly and convenient.

**HR Recruitment System**
Developed a web-based HR Recruitment System to manage job postings, applicant tracking, and the overall hiring process. HR staff can upload job vacancies, review applications, and schedule exams or interviews. Admins have access to manage HR accounts and approve job postings. Key features include automated email notifications to applicants, a transaction tracker for monitoring each stage of the hiring process, and generated reports for easy evaluation and documentation. The system streamlines recruitment operations, improves transparency, and reduces manual workload in the hiring process.

## Certifications

**NC II in Computer System Servicing** October 2023
**CSE (Professional Level) Passer** August 2023
